## 3.4   Screen shots

Home page

- o   Home page simply contains brief overview of some main features of the site.
- o   Like finding friends and chat with them, event storing and sharing and mail scheduling etc.

Login / Signup page

- o User can login through this page if he/she is registered.
- o If not registered then user can easily signup in the site by filling up signup form and OTP confirmation through mail he/she entered.
- o User can also change password if password is forgotten. By clicking on Forgot Password link under login button.
- o If user enters invalid details in login or signup form then appropriate message will be displayed.

Find friends
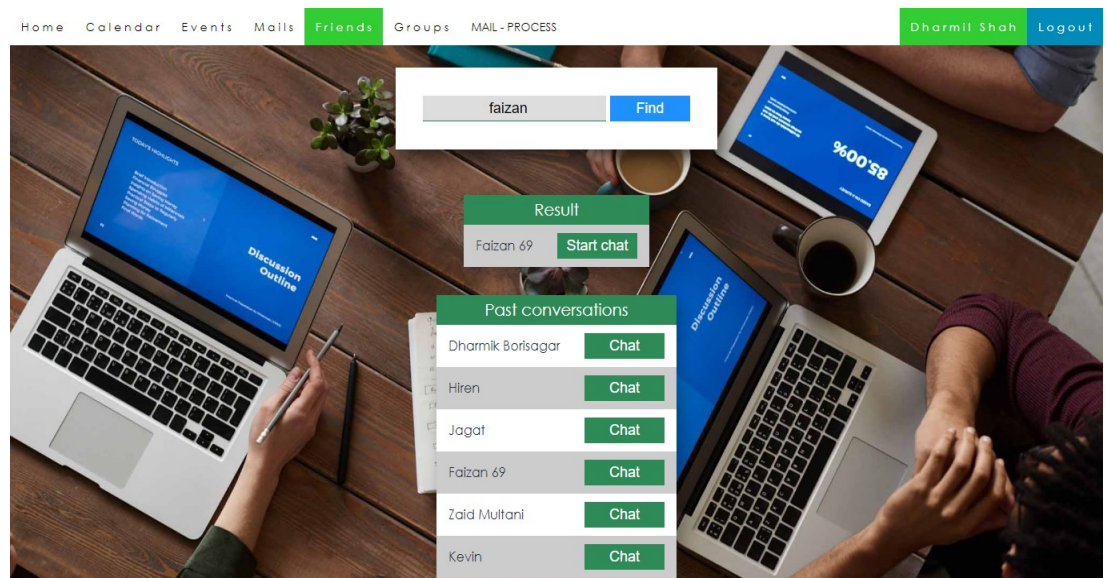

- o Here user can find other users registered on site.
- o User can enter username or proper email address of other users for searching and the result will be displayed.
- o User will also get list of users with whom he/she had conversations in past. So no need to find friend every time.
- o There is a chat button besides every user. By clicking there, chat module/page will be opened and user can chat with selected user.
Chat
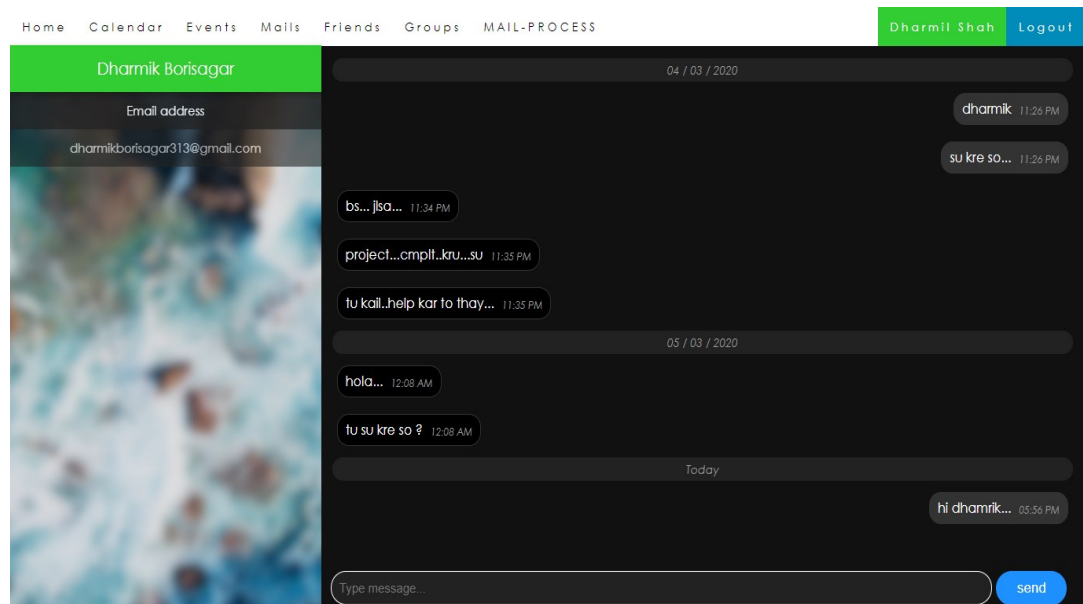

- o Username of other user will be displayed in left panel with his/her email-address.
- o Chat is displayed with message and message time in top to bottom method and it will be scrolled automatically to the bottom till last message.
- o Chatting division will be refreshed automatically in 5 second's time intervals. So no need to refresh every time for new messages.

Groups
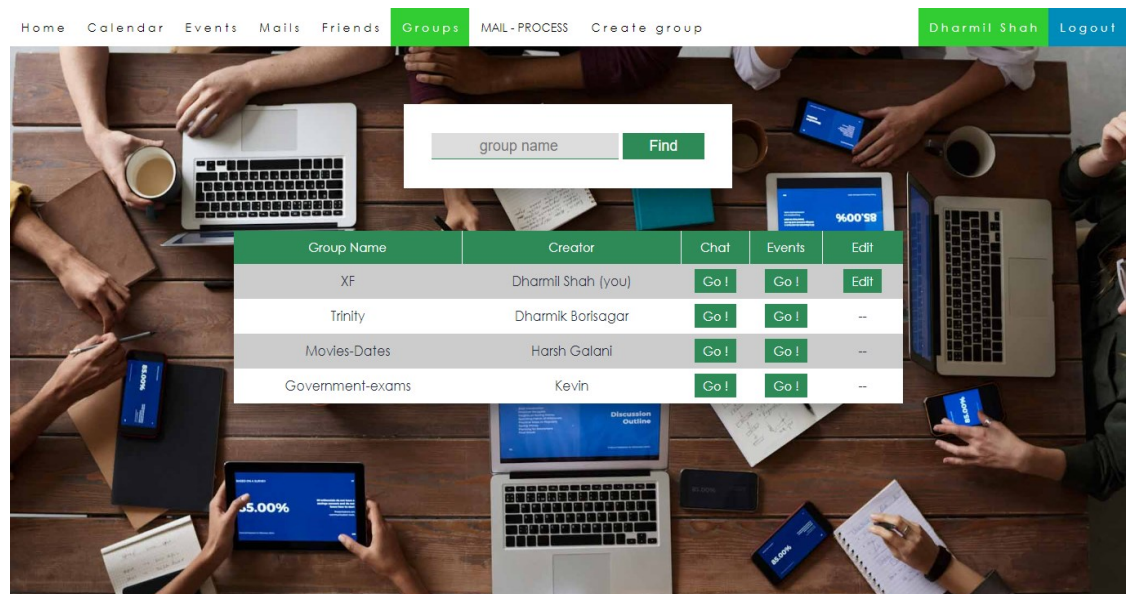

- o In this page user will get the list of all groups in which he/she is a participant or an admin.
- o Table includes Group name, Name of group admin (creator) and 3 options/buttons.
- o Clicking on chat button will redirect user to the group chat.
- o Events button will redirect user to the group event's page.
- o Edit button will redirect user to group edit page.
- o If user is admin of that group then 'Edit' button will be displayed to him/her.

Group Chat

o Like chat module it is same with messages, additionally the username of the message sender will be displayed on the top of the message.

o The left panel includes user name of all group participants/members.

o You can see their mail address by hover on their username.

o Below that, there are some settings/options related to group. Like edit group will redirect user to group edit page, events will redirect user to group event's page, event reminder (on/off) will turn-on or turn-off group event's reminders.

o Delete group will be displayed to the admin and by clicking that whole data of group will be removed from DB.

o Normal member will see 'Leave Group' option instead of delete group.

Edit group

- o This page is available just for group admin/creator.
- o In this page, admin can perform group operations like add participant, remove participant and rename group.
- o Possible validations are included.
- o Left panel is as same as group chat.

Calendar
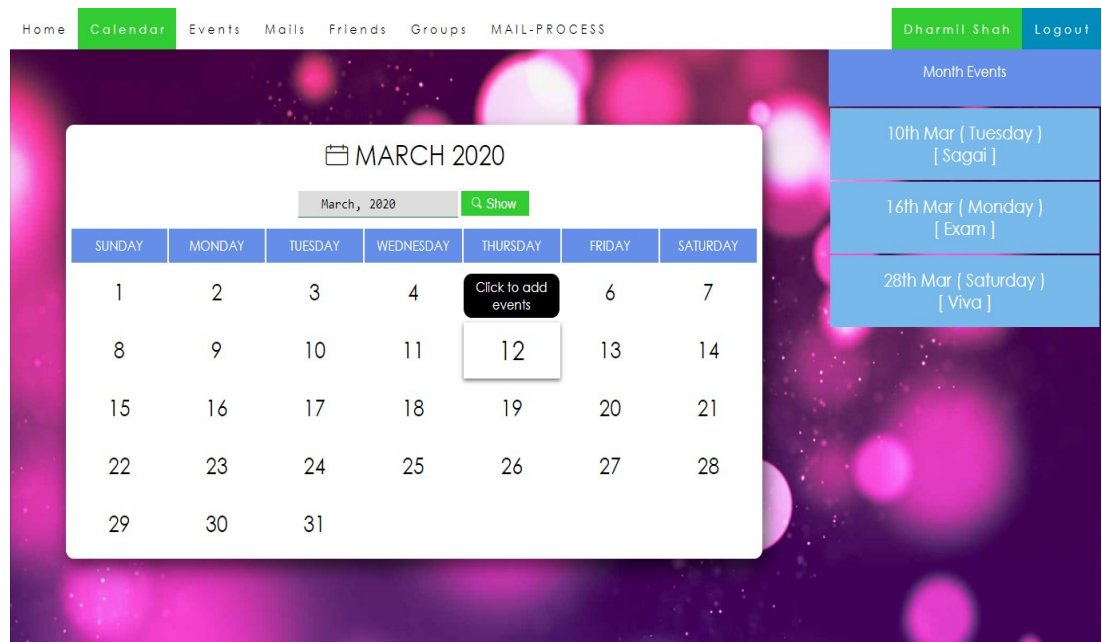

- o This page is available for all registered users of site.
- o Calendar provide easy way to see the month calendar.
- o A different page with same UI and structure is there for group_events named as group_calendar.php
- o User can select any month and year and can see calendar of that month.
- o By clicking on any of the date, user will be redirected to add event in that particular date as shown in tooltip.
- o In right side panel, user will see all the stored events in that particular month. Event date and event subject are shown.

Add Event

- o   In this page user can add his/her personal events.
- o   There is a different page with same form, UI and Structure for adding group events called add_group_events.php
- o   Form requires some event details which includes event date-time, event subject and event text/description.
- o   All fields are required.

Show Events

- o In this page user will see all the events that are stored by him/her.
- o Table includes Added on (date-time at which the event was added).
- o Event time (date-time of event occurrence).
- o Event subject and Details (event description).
- o And operations like delete or update event.

Show Group Events

- o In this page user will see all group events of particular group.
- o Table includes Added on (date-time at which the event was added).
- o Date/time (date-time of event occurrence).
- o Creator (username of group member who added this event).
- o Event subject and Details (event description).
- o And operations like delete or update event. These operations are just available for event creator and group admin.

Add Mail

- o   User can send scheduled mail or normal mail through this page.
- o   All fields are required.
- o   Details include date-time to send mail (if it is scheduled mail).
- o   Subject of mail and then content of the mail.
- o   At last there is e-mail address of the mail recipient(s). If there are more than one recipients than user has to separate them by putting coma (,) in between them.
- o   There are 2 options are given which are Schedule and Send now.

Show Scheduled Mails

- o In this page user will see the list of mails scheduled by him/her.
- o It includes date time of sending mail, mail subject, mail content, mail recipient and operations like update or delete mail.

Mail Process

- o This page is available only for site admins. It is important to keep an eye on mail sending process since this is one of the mail features of the site.
- o This page contains details about scheduled mails and event mails that are to be sent in next few minutes.
- o First table contains information about mail script. If mail sending script is running in background then Status will be 'Running' else 'Not running'.
- o If it is not running then admin can click on execute button. It also shows that when the script was run last time and time gap between current time and script run time.
- o Other tables show upcoming mails, sent mails and mails that failed to be sent.
